I. Community Health Improvement in Santa Rosa County

*Introduction & Mobilizing for Action through Planning and Partnerships*

Santa Rosa County, Florida is one of the healthiest places to live, work and play, according to the most recent National *County Health Rankings and Roadmaps* report released in 2014. In this report, the University of Wisconsin Population Health Institute and the Robert Wood Johnson Foundation ranked Santa Rosa County sixth out of the 67 counties in Florida for Health Outcomes. The findings in the report were exciting news for Santa Rosa County, especially for those in the community who strive to improve the health of local residents. In spite of this good news, the rankings also identify key Health Factor problems in the County such as poor health behaviors (increased tobacco rates and adult obesity) and insufficient clinical care (access to care) which may lead to poor health outcomes in the years to come.

Since 2012, members of the Santa Rosa County community have worked together to better understand current and future health needs in the County. Championed by the Florida Department of Health in Santa Rosa County, the process of assessing, prioritizing, and addressing health needs in the community has been completed using a nationally recognized approach, called Mobilizing for Action through Planning and Partnerships (MAPP).

> Communities come in many different sizes, shapes and colors. They vary widely in their assets and needs priorities they select to address, and the policies and programs they implement to improve the health of local populations. As a result, community health improvement efforts also vary. In the midst of all this variety is one constant: people working together. Source: Take action: www.CountyHealthRankings.com

This Community Health Improvement Plan 2014 was developed as a result of the community’s collaboration and evaluation by health leaders, experts, public health professionals, social services, faith-based organizations and other vested members of the Santa Rosa County community. As part of the process the partners formally organized the Santa Rosa County Health Improvement Steering Committee to work together to better understand current and future health care needs in Santa Rosa County.
The purpose of this Plan is to describe the short and long-term strategies and activities for each community health priority and objective over the next three years. A brief description of why these priorities and objectives are important for the Santa Rosa County community is provided. Community Health Priorities and Strategic Objectives of Santa Rosa County’s Community Health Improvement Plan are outlined in the table below:

II. Santa Rosa Community Health Profile

Introduction to Roadmap to Health

The University of Wisconsin Population Health Institute and the Robert Wood Johnson Foundation collaboratively developed the County Health Rankings and Roadmaps. The County Health Rankings and Roadmaps is a model for population health that emphasizes the factors that, if improved, can lead to healthier communities. Health improvement is no longer viewed as solely the responsibility of healthcare providers. Instead, health improvement belongs in our homes, schools, workplaces, neighborhoods, and throughout our entire communities. We know that taking care of ourselves by eating well and staying active, eliminating tobacco, obtaining recommended immunizations and screening tests, and seeing a doctor when we are sick all influence our health. Our health is also determined in part by access to social and economic opportunities; the resources and supports available in our homes, neighborhoods, and communities; the quality of our schooling; the safety of our...
workplaces; the cleanliness of our water, food, and air; and the nature of our social interactions and relationships.

Health Factors identified in the *County Health Rankings* influence the health of a County. We measure four types of health factors: health behaviors, clinical care, social and economic, and physical environment factors.

### Community Health Indicators

Santa Rosa County encompasses approximately 1,011 square miles of land in Northwest Florida and stretches on the south end from the white sandy beaches of Navarre to the rural farmlands bordering Alabama on its north. Home to more than 158,235 people, the majority of Santa Rosa residents are between the ages of 25-64. Similar to the demographics in the 2012 Community Health Assessment, below you will see quick facts for the Santa Rosa County community.

### DEMOGRAPHICS

![Demographics Chart](chart_image)

- **50**: 11.7
- **25-44**: 41.7
- **45-64**: 25.2
- **65+**: 11.2
- **State**: 32.0
- **County**: 11.7
The median household income in Santa Rosa County in 2012 was $55,193, making it one of the most affluent counties in Northwest Florida. Santa Rosa County’s unemployment rate in 2014 was 7.7%, slightly above the State average of 7.2%. Unemployment rates, a primary indicator of economic health, are displayed in the table below.
Poverty rates are a reflection of a community’s ability to meet basic needs necessary to maintain health and well-being and a high rate of poverty is both a cause and a consequence of poor economic conditions. It is also an indication of the availability of employment opportunities in a community. In Santa Rosa County, 10.8% of the total population lives below poverty level, which is substantially better than the State and nation. However, 18% of Santa Rosa children live in poverty and 34% of school-age children are eligible for the free lunch program.

Resources that enhance quality of life can have a significant influence on population health outcomes. Understanding the relationship between how population groups experience and are impacted on health is fundamental to the social determinants of health. These components of the determinants reflect a number of critical issues that make up the underlying factors. As noted in the National County Health Rankings reports, there is a positive relationship between health outcomes and advanced education levels. The education attainment in Santa Rosa County indicates that educational attainment is healthy:

- High school graduation rate = 88.4% (higher than the State average 70%)
- Residents with a Bachelor’s degree or higher = 24.7% (lower than the State average of 25.9%)

![Graph: Children in poverty in Santa Rosa County, FL](image)
Health Outcomes

As mentioned previously, Santa Rosa County ranks sixth out of the 67 counties in the State of Florida in terms of Health Outcomes, making it one of the healthiest in the State. Health Outcomes measures both mortality (rate of death) and morbidity (incidence of illness/disease). In essence, mortality is a measures for how long we live while morbidity measures how well we live.

Mortality in Santa Rosa County is lower than the State average and ranks the County as 12 out of the 67 counties. Mortality calculates premature death as it correlates to the number of years of life lost by the age of 75 per 100,000 population. The mortality rate under age one is not included in the calculation.

The leading cause of death in Santa Rosa County is cancer, whereas the leading cause of death in Florida and the United States is heart disease. Chronic diseases such as heart disease, cancer and diabetes are among the most prevalent and most costly of health problems in the County. In 2010, there were 1,149 deaths in Santa Rosa County. The top 10 major causes of death in rank order:
1. Cancer, 32%
2. Heart disease, 28%
3. Chronic lower respiratory disease, 10%
4. Unintentional injuries, 7%
5. Stroke, 7%
6. Alzheimer’s disease, 5%
7. Diabetes Mellitus, 3%
8. Pneumonia/influenza, 3%
9. Suicide, 3%
10. Kidney disease, 2%

Santa Rosa County ranks ninth in the State in quality of life (page 23), which measures self-reported poor health days (14%), poor physical days (4.6 for the County and 3.6 for the State), poor mental health days (3.4) and low birth weight (7.5).

Health Outcomes measures today’s health in our community.

Health Factors

Santa Rosa County ranks 14 in Health Factors in the State of Florida, according to the County Health Rankings and Roadmaps. Health Factors represent what influences the health of a County. The four types of health factors that are measured are: health behaviors, clinical care, social and economic, and physical environment factors.

Health Factors determine tomorrow’s health.

1. Health Behaviors

Santa Rosa County ranks 39 out of the 67 counties in the State of Florida for Healthy Behaviors. Healthy Behaviors reflects a person’s health beliefs. Good health behaviors include exercising regularly, eating a balanced diet, and up to date immunizations. A few of the poor healthy behaviors in Santa Rosa County are the use of tobacco products, elevated obesity and a high rate of Sexually Transmitted Diseases.
Alcohol

Excessive alcohol consumption considers both the amount of alcohol consumed and the frequency of drinking. Drinking moderately is associated with health benefits such as reduced risk of heart disease and diabetes\textsuperscript{iii}. On the other hand, excessive alcohol use is the third leading cause of preventable death in the U.S\textsuperscript{iv}. The National average is 10\%, Florida 16\% and Santa Rosa County 17\% for excessive drinking. Corresponding data for alcohol-impaired driving deaths for Florida is 29\% while Santa Rosa County is at 37\%.

Diet & Exercise

Good nutrition and exercise are essential for good health. Yet, half of adults and nearly 72\% of high school students in the U.S. do not meet the Centers for Disease Control and Prevention’s (CDC) recommended physical activity levels, and American adults walk less than adults in any other industrialized country. As of 2013, 29 million Americans lived in a “food desert”, without access to affordable, healthy food. Those with lower education levels, already at-risk for poor health outcomes, frequently live in food deserts\textsuperscript{v}.

Obesity is one of the biggest drivers of preventable chronic diseases in the U.S. Being overweight or obese increases the risk for many health conditions, including Type 2 diabetes, heart disease, stroke, hypertension and cancer.

According to 2012 Florida Census Update, Santa Rosa County’s adult obesity rate has increased in the past four years. In Santa Rosa County there are 52,692 people who are overweight and 47,104 are obese. The two together equate to almost two-thirds of the total County population. The average person who is overweight costs employers approximately $75 more annually than persons of normal weight, which equates to $3,951,900.

The combined cost to employers in Santa Rosa County for persons overweight and obese would exceed $99 million each year.\textsuperscript{vi}
The average person in the lowest obesity range (Grade 1) costs employers approximately $2,030 more annually than a person of normal weight. In 2014, if all 47,104 of Santa Rosa County residents that are obese were in Grade 1 (Body Mass Index, BMI, a number calculated from a person’s weight and height is a reliable indicator of body fat used to screen for weight categories that may lead to poor health outcomes) the cost to employers would be $95,621,1201.

<table>

</tr>
</tbody>
</table>

Source: emedicine.com

The link with obesity and physical activity in Santa Rosa County is mirrored in the following graphs, showing an increase in physical inactivity.

1 The actual cost would be higher, because about a third of obese residents would likely be in higher BMI categories (Grade II or III), with higher associated costs.
Florida Administrative Code mandates growth and development screening be provided for grades one, three and six (page 25-26). The BMI categories are: underweight less than fifth percentile, normal 5 - 84th percentile, overweight 85 - 94th percentile and obese greater than 95th percentile. The table below illustrates the trends for first, third and sixth graders in Santa Rosa County.

</tbody>
</table>

Note: Starting with the 2010 data, a new GRFSS methodology was introduced that included cell phone users. Data from prior years should only be compared with caution.
Tobacco Use

Tobacco use is identified as a cause of various cancers and cardiovascular disease as well as low birth weight and other adverse health outcomes. Measuring the prevalence of tobacco use in the population can alert communities to potential avoidable health problems and the need for cessation programs or the effectiveness of existing programs. The percentage of adults that are currently smoking “most days” or “everyday” in Santa Rosa County is 24%, which ranks among the highest usage rates in the State.

According to the 2012 Florida Charts update, there are 34,812 tobacco users in Santa Rosa County. The average smoker costs employers at least $5,800 more annually than employees who do not smoke. Costs to employers include increased expenses for employee health plans, absenteeism and loss of productivity. Individual costs to an average smoker living in Santa Rosa County are approximately $1,965 a year on cigarettes, and approximately $3,340 more a year on health care costs than non-smokers. Combined, these amounts represent nearly 15% of annual personal income per person in Santa Rosa County.

Smokers cost Santa Rosa County employers $201,901,600 each year. viii

The percentage of Santa Rosa County youths who have used cigarettes in the last 30 days is 9.1%, with the State at 6.1%. The percentage of youths who use smokeless tobacco products in Santa Rosa County is 6.0%, with the State rate being 3.5% ix
Sexually Transmitted Diseases

- Total Early Syphilis increased by 900% (change from one to ten cases).
- Early Latent Syphilis increased by 200% (change from one to three cases).
- Gonorrhea increased by 76.5%.
- Chlamydia increased by 4.5%.

While chlamydia and gonorrhea reports remained relatively constant in 2011, Santa Rosa County experienced increases in infections of early and latent syphilis by 13.7% and 10.4% respectively. Comparing weeks 1-40 (January-October) with the percent of change from 2011 with 2012 in Santa Rosa County:

Sexually Transmitted Diseases (STDs) in Santa Rosa County are below the Florida and National averages. However, over the last four years there has been a steady increase in the rate of STDs, with a 2.5% increase in just one year from 2012 to 2013.

As of October 2012, there were 148 Santa Rosa County residents living with HIV/AIDS. In 2011, Santa Rosa County had seven HIV cases and in 2012 there were five new cases, which accounts for a 71% increase. There were seven reported AIDS cases in 2011 and five in 2012, a 29% decrease during the same time period.
2. **Clinical Care**

Clinical Care looks at “quality of care” and “access to care.” Access to comprehensive, quality health care services is important for the achievement of health equity and for increasing the quality of a healthy life for everyone. Santa Rosa ranks 31 in Clinical Care out of the 67 counties. Access to health services means the timely use of personal health services to achieve the best Health Outcomes (physical, social, and mental health status, prevention of disease and disability, detection and treatment of health conditions, quality of life, preventable death and life expectancy). Disparities in access to health services affect individuals and society. Limited access to health care impacts people’s ability to reach their full potential, negatively affecting their quality of life. Barriers to access include:

- Lack of availability of health services
- High cost of services
- Lack of insurance coverage

Inappropriate use for non-emergent and preventive treatment of the Emergency Department is 14% higher than the State average, resulting in avoidable costs in excess of $10 million. Many people who use the hospital Emergency Departments do not have a Primary Care Physician (PCP), and of those who have a PCP, many do not see the physician on a regular basis. Hospital Emergency Departments are the most expensive setting for obtaining health care on an outpatient basis, especially when care can be more appropriately addressed in a non-emergent setting. Since Florida has declined to participate in the Medicaid expansion program under the Affordable Care Act, inappropriate use of Emergency Departments is likely to worsen.

In Santa Rosa County, 18% of the population lacks health insurance, which is below the State uninsured level of 25%. Of the residents in Santa Rosa County, 15% reported that they did not see a doctor due to costs. Medicare costs per client in the County are $10,650 which is lower than the State rate of $11,097.
In Santa Rosa County there are 100 Primary Care Physicians (includes family and general practitioners, internists, and pediatricians) with the population-to-physician ratio of 1,541:1 which is lower than the State at 1438:1. Analyses at the County level show lower mortality rates where there are more primary care physicians. According to *Income, Primary Care and Health Indicators*, when State-level economic and demographic characteristics were controlled for, an increase of one primary care physician per 10,000 population (about a 20 percent increase) was associated with a 6% decrease in all-cause mortality and about a 3% decrease in infant, low-birth weight, and stroke mortality. For total mortality, an increase of one primary care physician per 10,000 population was associated with a reduction of 34.6 deaths per 100,000 population at the State level.

The number of dentist in the County is 38, with the population-to-dentist ratio of 4,334:1, among the worst in the State. The chart on page 24 referencing the County’s Ambulatory Care Sensitive oral health conditions (ACS), which are conditions which are largely avoidable with adequate prevention and primary care. The use of hospital Emergency Departments, among the most expensive form of medical care, for the treatment of these ambulatory sensitive conditions may indicate lack of access to primary dental care. The reasons Floridians do not receive regular preventive care include lack of dental coverage for adult Medicaid patients, lack of private-practice dentists willing to accept Medicaid’s low payment rates, lack of
County health department resources, lack of affordable dental insurance or inability to meet high co-pays, and lack of awareness of the importance of dental health to overall health.

The number of mental health providers in Santa Rosa County also ranks low with a population-to-provider ratio of 8,942:1. This mental health provider ratio is among the bottom half in the State.

The diabetic screenings are improving for Santa Rosa County; however, the County is 7% below the State average for this measure.

### Building Community Capacity through Collaboration

One important role of public health is the assessment of the capacity of a community to meet the healthcare needs of citizens and to work to provide the access needed to meet those needs by working together to make well-considered and collaborative decisions, develop a clear vision of the future while creating local solutions for local problems and acting judiciously to make these real.

Santa Rosa County’s Health Improvement Steering Committee goal is to successfully leverage resources and address broad community health concerns that have the greatest impact on improving health outcomes. For this, community capacity must exist.
Santa Rosa County’s capacity was assessed through the four MAPP assessments to create this Plan.

**The four MAPP Assessments**

1. The **Community Themes and Strengths Assessment** provides an understanding of the issues the residents and community feel are important: “What is important to our community?” “How is quality of life perceived in our community?” and “What assets do we have that can be used to improve our quality of health?” *(March 2012)*

2. The **Local Public Health System Assessment** (LPHSA) focuses on all of the organizations and entities that contribute to the public’s health. The LPHSA answers the questions: "What are the components, activities, competencies, and capacities of our local public health system?" and "How are the Essential Services being provided to our community?" *(August 2012)*

3. The **Community Health Status Assessment** identifies priority community health and quality of life issues: "How healthy are our residents?" and "What does the health status of our community look like?" *(June 2010)*

4. The **Forces of Change Assessment** focuses on identifying forces such as legislation, technology, and other impending changes that affect the context in which the community and its public health system operate. This assessment answers the questions: "What is occurring, or might occur, that affects the health of our community or the local public health system?" and "What specific threats or opportunities are generated by these occurrences?" *(October 2012).*

These collaborative activities allowed the Santa Rosa County Community Partners to identify strategic issues during Phase 4 of the MAPP process which resulted in the development of a Community Balanced Scorecard. As the basis for this Plan, the Community Balanced Scorecard is used to link the identified strategic issues during MAPP Phase 5, Formulate Goals and Strategies.

Upon completion and review of data collected through the above four assessments, the Health Priority Committees, in collaboration with the Steering Committee, will continue to develop action plans for improving the health of the Santa Rosa County community. This Community Health Improvement Plan takes that data and information to provide clear direction on how our community will move forward in addressing the health issues identified.
Summary of Community Assessment Results

As previously mentioned, a component of the MAPP Community Themes and Strengths Assessment included a survey intended to gather residents’ thoughts, opinions and concerns about their health, and the quality of healthcare services available in Santa Rosa County. This survey was conducted County wide over a two-month period (March - May 2010) to ascertain the perceived health issues that our residents felt were most important, including quality of life. For more information on the MAPP Assessment results, please see the Santa Rosa County 2013 Community Health Assessment online at flhealth.gov/chdsantarosa.

The majority of the respondents were in the following age groups:

- 14% were under 25 years
- 23% were 26-34 years
- 23% were 35-44 years
- 20% were 45-54 years
- 14% were 55-64 years
- 5% were 65 or older
- 1% did not complete the survey

Survey respondents were asked to identify their home Zip code. Thirty-six percent of all respondents were from the 32570 Zip code in Milton. Twenty-one percent were from Milton Zip code 35283. In the south end of Santa Rosa County, sixteen percent of respondents claimed 32566 (Gulf Breeze and Navarre) as home. The 32571 Zip code for Pace and Milton areas represented over fifteen percent of respondents. Gulf Breeze Zip codes 32561 and 32563 were reported by less than 1 percent and 5 percent of residents, respectively. Jay Zip code 32565 had over 4 percent of the respondents. There were zero responses for Milton 32572 and Gulf Breeze 32562, as they are Zip codes for post office boxes and not household locations.

A total of 990 surveys were collected to complete this assessment. The sample size in relation to the Santa Rosa County 2010 U.S. Census population estimate of 154,104 reflects a 95% confidence interval with +/-3% accuracy. The demographics surveyed closely mirrored the race and ethnic origin of the County’s population as a whole.

“A healthy community is one that continuously creates and improves both its physical and social environments, helping people to support one another in aspects of daily life and to develop to their fullest potential.” Source: Healthy Community defined by the CDC’s Healthy Places: www.cdc.gov/healthyplaces
The survey questions included, but were not limited to, the following:

- What problems have stopped you from getting the healthcare you need?
- What would be an incentive for you to quit smoking?
- Do you have medical insurance?

For the complete listings along with responses, reference the 2013 Community Health Assessment beginning on page 101 online at flhealth.gov/chdsantarosa

The Steering Committee will be delivering a new community survey that will address the following questions, but not limited to:

- What do you feel are the barriers for getting the healthcare you need?
- What are unhealthy behaviors you are most concerned about in Santa Rosa County?
- What are the most important features of a healthy community?
- What are the top health problems that are most important to Santa Rosa County?
- What are the top health services that are difficult to obtain in the community?
- What social services do you or have you used?
- Do you have a primary care provider?
- What health care services do you need?
- How do you get to appointments for health care or social services?
- Do you get an annual check-up?
- Do you take prescriptions you are prescribed?
- Do you use tobacco products?
- Do you have chronic health issues? Did smoking or tobacco products contribute to the health issues?
- Do you eat three meals a day?
- Do you have access to healthy food?

Following the collection of the survey data, focus groups will be conducted on the common themes and reported in the 2014-2015 Annual Report of the Santa Rosa County Community Health Improvement Plan.
Community Input

Assets & Barriers to Community Health

This section explores the many factors and barriers to health and improved quality of life for residents in Santa Rosa County, and illustrates how community strengths and assets make Santa Rosa County a viable place for community health improvement efforts.

Local Public Health System

Stakeholders, organizations and agencies comprise the Local Public Health System in Santa Rosa County. To address all factors that contribute to individual and community health, it takes more than involvement from traditional healthcare and public health entities interfacing with individuals in the community. It takes an intricate network of community agencies with different roles and relationships to support the services the community need.

Source: Mobilizing for Action through Planning and Partnerships
To better understand the role of the Santa Rosa County LPHS in the community, we conducted a system-wide performance assessment using the National Public Health Performance Standards Program (NPHPSP) Local Public Health Performance Assessment Instrument.

The following 10 Essential Public Health Services were used to assess system performance:

1. Monitor health status
2. Diagnose and investigate health problems
3. Inform, educate and empower people
4. Mobilize communities to address health problems
5. Develop policies and plans
6. Enforce laws and regulations
7. Link people to needed health services
8. Ensure a competent workforce
9. Evaluate health services
10. Conduct research for innovations

Santa Rosa County’s ranking for this assessment of the 10 Essential Public Health Services ranked “Link People to Needed Personal Health Services” highest, followed by “Enforce Laws” and “Develop Policies and Plans.” Lowest ranked was “Monitor Health Statues.”

RANK ORDERED PERFORMANCE SCORES FOR EACH ESSENTIAL SERVICE
Community Strengths & Assets

Santa Rosa County’s population has grown by 30.01% since 2000. The median cost of a home is $149,700. Home appreciation the last year has been 1.60%. Compared to the rest of the country, Santa Rosa County’s cost of living is 2.30% lower than the U.S. average. Residents of Santa Rosa County perceive that they have a higher quality of life, which is linked to higher income and education, than the State average. The assets listed are those of the community as a whole. The table below illustrates the myriad community offerings and activities in the County:

**Santa Rosa County Community Health Improvement Plan**

**Emotional Department Dental Visits & Charges**

Ambulatory Care Sensitive oral health conditions (ACS) are those considered largely avoidable with adequate prevention and primary care. The use of hospital emergency departments – among the most expensive form of medical care – for the treatment of ACS conditions may indicate lack of access to primary dental care. Among the reasons Floridians do not receive regular preventive care include lack of dental coverage for adult Medicaid patients, lack of private-practice dentists willing to accept Medicaid’s low payment rates, lack of county health department resources, lack of affordable dental insurance or inability to meet high co-pays, and lack of awareness of the importance of dental health to overall health.

Floridians absorb the cost of Medicaid and uninsured ER dental visits in several ways including higher health insurance premiums and healthcare costs, increased tax dollars needed to fund the state Medicaid program, increased local tax dollars to support local public hospitals, and lost productivity.

**Visits for Young Children for Preventable Conditions**

**Charges for Young Children for Preventable Conditions**

**Policy Indicators**

- **High numbers of Medicaid patients visiting the ER for ACS dental problems suggest a lack of access to dentists or oral healthcare clinics accepting Medicaid for both preventative care and for treatment.**
- **ER visits during the regular work day and traditional business hours, combined with ACS diagnoses, suggest visits being made to the ER in lieu of a clinic or dental office.**
- **Rates of adult tooth decay are higher in older adults yet patients aged 20 to 34 years comprise the largest segment of ER visits, suggesting that lack of dental insurance or an inability to meet high co-pays is driving such visits.**

III. Santa Rosa County Community Health Improvement Plan

Executive Summary

We know that taking care of ourselves by eating well and staying active, not using tobacco products, getting the recommended immunizations and screening tests, and seeing a doctor when we are sick all influence our health. Our health is also determined in part by access to social and economic opportunities; the resources and supports available in our homes, neighborhoods, and communities; the quality of our schooling; the safety of our workplaces; the cleanliness of our water, food, and air; and the nature of our social interactions and relationships.

The mission of the Santa Rosa County Health Improvement Steering Committee is to periodically assess the health status of residents of Santa Rosa County, Florida, and to develop plans and support initiatives to address the priority health needs of the County.

Targets and measures outlined in this Plan are aligned with National Healthy People 2020 goals and objectives. This National initiative, produced by the U.S. Department of Health & Human Services, provides science-based benchmarks for our community to track and monitor, as well as evidence-based interventions and information to guide health promotion and disease prevention efforts to improve the community.

Source: take Action: www.CountyHealthRankings.com
Developing the New Santa Rosa County Community Health Improvement Plan

The first Community Health Improvement Plan for the Santa Rosa County community was developed in 2013. In the first year of the Plan, the committees realized that some strategies could not be delivered. At the annual Santa Rosa County Community Health Improvement Plan meeting in August 2014, the revised health priorities, goals and strategic objectives were approved by the stakeholders and partners. Chairs and vice-chairs were elected and approved to lead the three health priorities committees.

The success of each goal is based on outcome measurements that track the progress and impact of the project. Each goal has an assigned owner and, in some cases, a task force and/or additional work group who are (or will be) working together to develop coordinated Action and Evaluation plans. Progress has been monitored by each owner as well as by the Steering Committee. Continual Plan updates will be provided. Lessons learned from actions taken will help guide key decision makers to ensure the right strategies are implemented and the desired outcomes achieved.

The key success and progress within this CHIPt is the community involvement which identified the need to revise the current Community Health Improvement Plan and the publishing and deployment of the September 2015 Plan that is now "in action". Below are the three Health Priorities with their corresponding Statement of Need, Background and Progress. Evaluation will remain important throughout the remainder of the three-year cycle so measurable progress of the Plan is meaningful.

The Santa Rosa County Community Health Improvement Steering Committee voted unanimously to integrate with the Partnership for a Healthy Community and the Live Well Northwest Florida Workgroups. It was agreed that the 2013 Community Health Improvement Plan would be revised, page 41-45.

The Mission of the Partnership for a Healthy Community is to periodically conduct comprehensive health status assessments, and to advance, support or promote collaborative initiatives to improve health and quality of life for residents of Escambia County and Santa Rosa County in Northwest Florida.

The Partnership for a Healthy Community is a Florida not-for-profit corporation was formed in 1994. The Board of Directors of the Partnership is broadly representative of key constituencies in the two counties.

Partnership for a Healthy Community hosted three roundtables bringing both Santa Rosa and Escambia Counties together to identify common goals and strategies. As a result the Healthy Weight and Tobacco Workgroups merged. The Access to Care health priority will have an Oversight Group which will collaborate on all issues as well as individually address the needs of Santa Rosa County’s Transportation issue.
Policy Changes to Move Forward

Recognizing the vision for community health improvement in Santa Rosa County and the need to implement the strategies in the Plan, we will need to collaboratively develop and promote policies that reinforce this effort. In this Plan we will need to incorporate the development of policies that reinforce this effort to address our collective concerns, guide the implementation of the strategies proposed in the Plan and promote a “Health in All Things” legislative approach.

<table>
<thead>
<tr>
<th>COMMUNITY HEALTH PRIORITY</th>
<th>POLICY RECOMMENDATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Improve Access to Care</td>
<td>☐ Support policies and programs that reduce the proportion of persons who are unable to obtain or delay in obtaining necessary medical care, dental care, or prescription medicines.</td>
</tr>
</tbody>
</table>
| Healthiest Weight Santa Rosa | ☐ Develop or support programs or initiatives that provide training and educational materials for primary care providers on healthy eating and physical activity.  
☐ Promote healthy eating and physical activity as part of daily life through education, programs, and initiatives in a variety of settings including schools, workplaces, and public spaces.  
☐ Support local, State, and federal campaigns to encourage healthy eating and physical activity. |
| Tobacco Free Santa Rosa | ☐ Promote private sector rules and public sector regulations that restrict or prohibit tobacco use.  
☐ Actively support the enforcement of laws prohibiting sales of tobacco to minors. |

The Santa Rosa County Community Health Improvement Plan (CHIP) was developed through collaboration with community stakeholders and partners who are putting this Plan into action. There are specific goals with each of the identified community health priorities. Although this Plan does not address every strength and weakness identified in the Community Health Assessment, it does provide clear direction for this Plan’s cycle.

MAPP Phase Four: The identification of Strategic Issues was developed in MAPP Phase 4. After analysis and consideration of community feedback and statistical health data, the Santa Rosa Community Health Improvement Partners developed a list of community health priorities that would have the greatest impact in the community.
Questions asked during the selection process:

1. Statistical Information:
   a. Is the measure/problem trending upwards or downwards?
   b. Is Santa Rosa County significantly trending better or worse that the State and/or peer counties?

2. Community Perception:
   a. Does the community believe this issue is a main health concern?

3. Opportunity for the greatest possible impact in the community:
   a. When considering the resources and capacity of the Santa Rosa community and health system, what initiatives created the greatest impact in the past three years?
   b. What is the risk of not addressing an issue?

The answers to the following statements with the feasibility criteria above were used in the determination to identify the strategic objectives:

1. Movement toward addressing a strategic issue.
2. Must be realistic.
3. Should be attainable in 1-3 years (MAPP action cycle is 3 years)
4. Must be measurable.

**MAPP Phase Five: Formulating Goals & Strategies**

Where applicable, targets and measures outlined in this Plan are aligned with the science-based measureable objectives and goals identified in Healthy People 2020 at all levels; National, State and local. These objectives and goals allow communities to engage multiple areas, to take actions to strengthen policies and improve practices that are driven by the best available knowledge and evidence. In parallel with Healthy People 2020, the overarching goal of utilizing evidence based goals and strategies is to ensure that Santa Rosa County builds a sustainable system for promoting quality of life, healthy development, and health behaviors across all life stages.

Source: MAPP
MAPP Phase Six: Take Action! Evaluate and Measure

The implementation phase of the MAPP process is a three year cycle. It began in July 2013 and will end with the completion of the next Community Health Assessment in 2015. During this phase, the efforts of the previous phases begin to produce results, as the Santa Rosa Community Health Improvement Plan Steering Committee, partners, and community members develop and implement the action plans correlating to the Health Priorities of the community.

The success of each goal is based on outcome measurements that track the progress and impact of the project. Each goal has an assigned owner, and in some cases, a task force and/or additional work group who are (or will be) working together to develop coordinated Action and Evaluation plans. Progress will be monitored by each owner as well as the Steering Committee.

Evaluation will remain important throughout the remainder of the three-year cycle so measurable progress of the Plan is meaningful. Continual Plan updates will be provided by the Steering Committee. Lessons learned from actions are taken will help guide key decision makers to ensure the right strategies are implemented the desired outcomes achieved.

With the publishing and deployment of this document, the Santa Rosa Community Health Improvement Plan is now “in action”. However, it is important to note that, like all things in life; this document is flexible and can accommodate potential actions resulting from “Forces of Change.”
Health Priority: Improve Access to Care

Statement of Need
Access to comprehensive, quality health care services is important for the achievement of health equity across all populations and for increasing the quality of a healthy life for everyone. Access to health services encompasses four components: coverage, services, timeliness, and workforce. Its service is wide and includes overall physical, social, and mental health status, prevention of disease and disability, detection and treatment of health conditions, quality of life, preventable death and life expectancy. Disparities in access to health services affect individuals and the community. Limited access to health care impacts people’s ability to reach their full potential, negatively affecting their quality of life. Barriers to services include lack of availability, high cost and lack of insurance coverage. In Santa Rosa County, more than 11% of residents live below the poverty line, 13% are elderly and 14% disabled. The unemployment rate sits just above 9%, with a median household income of $55,129. Only 18% of Santa Rosa residents do not have health insurance, below the State uninsured level of 25%. Of the residents in Santa Rosa County, 15% could not see a doctor due to costs. Medicare costs per client in the County are $10,650. The Medicaid and Transportation Plan Disadvantage (TDSP) in Santa Rosa County serves .79% (402 people) of the potential population, ranking the lowest in the State, leaving over 50,000 people without the necessary transportation. There is currently no fixed-route transportation service available in the County.

Background
In Santa Rosa County the use of hospital Emergency Departments, among the most expensive form of medical care, for treatment that should be provided by a primary care physician may indicate lack of access. Inappropriate use of the Emergency Department is 14% higher than the State average, the cost of which exceeds $10 million. In the County there are 100 Primary Care Physicians with the population-to-physician ratio 1,541:1. The number of dentists in the Santa Rosa County community is 38, with the population-to-dentist ratio of 4,334:1, among the worst in the State. The reasons Floridians do not receive regular dental preventive care include lack of dental coverage for adult Medicaid patients, lack of private-practice dentists willing to accept Medicaid’s low reimbursement rates, lack of County Health Department resources, lack of affordable dental insurance or inability to meet high co-pays, and lack of awareness of the importance of dental health to overall health. The low ratio of mental health providers in Santa Rosa County to the population is 8,942:1. Mental health provider ratio is among the bottom half in the State.
Health Priority Access to Care: Goals, Strategies and Objectives

**Goal 1**: Santa Rosa County will improve access to health care for residents.

*Healthy People 2020: AHS-6 Reduce the proportion of persons who are unable to obtain or delay in obtaining necessary medical care, dental care, or prescription medicines.*

**Healthiest Weight Santa Rosa**

**Statement of Need**

According to 2012 Florida Census Update, Santa Rosa County’s adult obesity rate increased over a four year period. In Santa Rosa County, 52,692 people are overweight and 47,104 are obese. The two together equate to almost two thirds of the total County population. The average person who is overweight costs employers approximately $75 more annually than persons of normal, weight which equates to $3,951,900. The average person in the lowest obesity range (Grade 1) costs employers approximately $2,030 more annually than a person of normal weight. In 2014, if all 47,104 of Santa Rosa County resident that are obese were in Grade 1, the cost to employers would be $95,621,120. **Therefore, the combined cost to employers in Santa Rosa County for all persons overweight and obese would exceed $99 million each year annually.**

At the end of the **2013-2014 school year, over 28% of students in first, third and sixth grade were overweight or obese.** In 2014, sixth graders that were considered at risk for being overweight or obese were 35%.

The risk of developing type 2 diabetes increases with age, obesity, and lack of physical activity. Diabetic screenings are improving in Santa Rosa, however, the County is 7% below the State average.

**Background**

Census data shows that, between 2010 and 2012, the rate of overweight and obese adults increased by 3.3%, or 3,158 individuals. Adolescents (ages 10 to 19) and young adults (ages 20 to 24) make up 21% of the population of the United States. The behavioral patterns established during these developmental periods help determine young people's current health status and their risk for developing chronic diseases in adulthood. The financial burdens of preventable health problems in adolescence are large and include the long-term costs of chronic diseases that are a result of behaviors begun during adolescence. This is important for the Santa Rosa County community because overweight adolescents have a 70% chance of becoming overweight or obese adults.

Santa Rosa County Community Health Initiative decided to focus on adolescent obesity to reduce the rates of adult obesity and improve health outcomes. Healthy students make a healthy community. The Community Health Improvement Plan will integrate the Let’s Go! 5-2-1-0 campaign to work in the multi-sector, community and schools to change the behaviors of students.
## Health Priority Healthiest Weight Santa Rosa: Goals, Strategies and Objectives

### Goal 1: Increase the delivery of 5-2-1-0 educational materials to 75% of target school age population.

*Healthy People 2020: NWS-10 Reduce the proportion of children and adolescents who are considered obese.*

Tobacco use is the single most preventable cause of death and disease in the United States. Each year, approximately 443,000 Americans die from tobacco-related illnesses. For every person who dies from tobacco use, 20 more people suffer with at least 1 serious tobacco-related illness. In addition, tobacco use costs the U.S. $193 billion annually in direct medical expenses and lost productivity. According to the 2012 Florida Charts update, there are 34,812 tobacco users in Santa Rosa County. The average smoker costs employers at least $5,800 more annually than employees who don’t smoke. Costs to employers include increased expenses for employee health plans, absenteeism and loss of productivity in the workplace. Smokers cost Santa Rosa County employers $201,909,600 annually.

Individual costs to an average smoker living in Santa Rosa County are approximately $1,965 a year on cigarettes, and approximately $3,340 more a year on health care costs than non-smokers. Combined, these amounts represent nearly 15% of annual personal income per person in Santa Rosa County.

Background

According to Healthy People 2020, in 2008, 48.3% of adult smokers aged 18 years and older reported an attempt to stop smoking in the past 12 months. Tobacco use is identified as a cause of various cancers and cardiovascular disease as well as low birth weight and other adverse health outcomes. Measuring the prevalence of tobacco use in the population can alert communities to potential avoidable health problems and the need for cessation programs or the effectiveness of existing programs. The percentage of adults that are currently smoking “most days” or “everyday” in Santa Rosa County is 24%, which ranks it among the highest usage rates in the State.

Santa Rosa County youths who have used cigarettes in the last 30 days are 9.1%, with the State at 6.1%. Youths who use smokeless tobacco products in Santa Rosa County is 6.0%, with the State rate being 3.5%
### Health Priority Tobacco: Goals, Strategies and Objectives

IV. How You Can Improve Community Health In Santa Rosa County

Community health improvement is a moving and living process. Santa Rosa County promotes a “Health in All Things” approach to community health planning and is, therefore, looking for partners in a variety of sectors. If you, or your organization, are the missing partner in the Santa Rosa County Community Health Improvement Plan (CHIP) and would like to partner across the local health system in Santa Rosa County to develop recommendations, implement programs and evaluate our efforts, please join us! Contact the Florida Department of Health in Santa Rosa County to get more information about how you can help support our efforts to improve community health in Santa Rosa County. We look forward to working with you!

Live Well Northwest Florida is the long-term collaborative effort, under the umbrella of the Partnership for a Healthy Community, to improve the overall health of residents in Escambia and Santa Rosa Counties, Florida.

Revisions

Health Priority: Healthy Weight

Goal: Increase the number of children and adults who eat more fruits and vegetables, limit screen time to 2 hours or less, are physically active 60 minutes each day, and consume less sugar-sweetened drinks.

Revision: Combine goals 1-3 into one new goal as stated above.

Updated Priorities

1. Increase physical activity and healthy nutrition practices in child care centers
   a. Assess pre-implementation practices and policies related to physical activity and nutrition in child care centers

2. Promote and support adoption of 5-2-1-0 Let's Go! Program in elementary schools.
   a. Assess pre-implementation classroom practices and policies in schools
   b. Disseminate 5-2-1-0 information to public elementary schools
   c. Disseminate 5-2-1-0 information to private elementary schools
   d. Assess post-implementation practices and policies in schools

3. Distribute 5-2-1-0 information to the community through faith-based organizations
   a. Survey faith-based organizations regarding current activities and needs related to healthy weight
   b. Develop and distribute a 5-2-1-0 toolkit for faith-based organizations based on needs identified in survey
   c. Assess post-toolkit activities in faith-based organizations

Health Priority: Access to Care

The Access to Care health priority will have an Oversight Group which will collaborate on all issues as well as individually address the needs of Santa Rosa County’s Transportation issue.

**New Live Well Access to Care Workgroups**

1. Assure residents of Escambia and Santa Rosa Counties access the right health and/or social services at the right time and at the right place

   **Referral Management Software Subcommittee**
   a. Encourage exchange of key client information to improve access and coordination of services
      i. Maintain and distribute a centralized directory of healthcare services *(Santa Rosa County)*
      ii. Implement a shared electronic platform and universal intake-form among area health and social services *(Escambia County and Santa Rosa County)*

   **Safety Net Providers Subcommittee**
   a. Implement a pilot Emergency Department diversion / care management program *(Escambia County)*
   b. Increase access to resources for non-emergency healthcare for underserved clients. *(Escambia County and Santa Rosa County)*

   **Specialty Referral Subcommittee**
   a. Increase the availability of medical and surgical specialists in the WeCare program *(Escambia County and Santa Rosa County)*
   b. Develop and implement a volunteer dental provider pool in the WeCare program for underserved adult patients *(Santa Rosa County)*
   c. Establish the base level of behavioral and mental health services for underserved population *(Santa Rosa County)*

   **Santa Rosa Issues Subcommittee**
   2. Review transportation as a significant barrier to underserved residents *(Santa Rosa County)*
